

Microsoft POWER BI® Training

On-Site and Remote Training Available

Power BI offers enterprises the chance to easily visualize and analyze their data at a fraction of the cost.

This cloud-based BI tool integrates seamlessly with existing applications, creates customizable information dashboards, and is recognized for its simplicity and performance. Elite provides up-to-date Power BI training for the analyst and end user. Our Power BI Certified instructors can give you hands-on training, tailored to your industry and use, on-site or virtual. Having an amazing tool at your disposal means you need to have knowledgeable employees using it. Customized training and workshops using your data are available to extend the learning experience and increase student adoption.

Power BI Analyst

Length: 2 Days

Audience: Beginner to Intermediate

Course Format: This course is designed for students who are new to Power BI or who have limited experience with the software. Students will learn the fundamentals of the tool and how to apply basic functionality to build and share dashboards of data visualizations using their data.

Power BI Advanced

Length: 2-3 Days

Audience: Intermediate to Advanced

Course Format: This intermediate-advanced Power BI training course builds on the Power BI Analyst class, teaching the advanced dashboard skills participants need in order to successfully build more sophisticated data visualizations. During the class, students connect to various data sources, shape and combine data, work with reports, and create and share more sophisticated dashboards.

Elite provides up-to-date Power BI training for the analyst and end user. Our Power BI Certified instructors can give you hands-on training, tailored to your industry and use, on-site or virtual.
